

A tale of two systems: Maps and correspondences.

Prof. Shrihari Sridharan, IISER Thiruvananthapuram.

In this expository talk, we describe the dynamics of holomorphic rational maps defined on the Riemann sphere and narrate a result concerning the normality of the family of iterates of the map and the equidistribution of inverse images of points. We then generalise the same to the setting of holomorphic correspondences, explaining our way and motivation from the study of maps to that of correspondences.
